LAB 6 TASK

**Submitted to Miss Hurmat Hidayat**

TASK

1:

Description:

We have make topology by using 2 PC's one Switch and two Server. One server is used to make email network and the other server is used to make customize DNS.
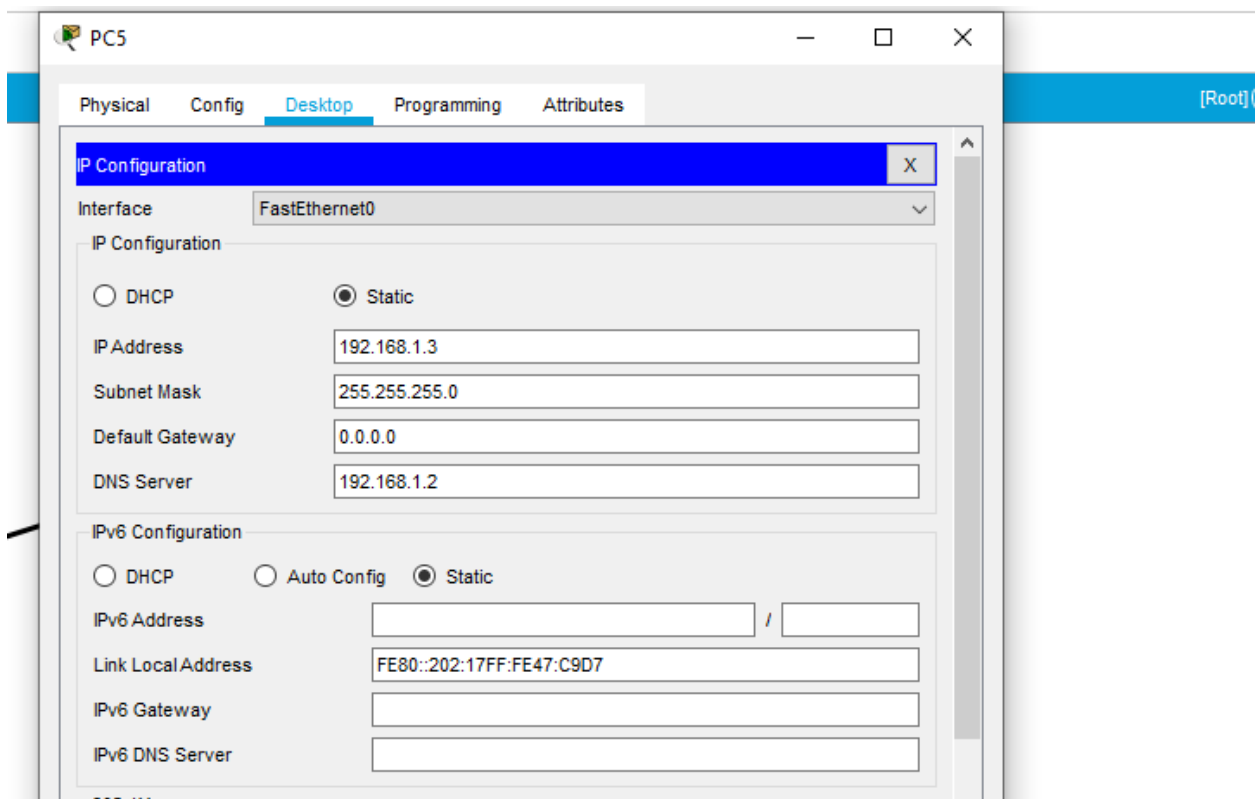

Description:

This is first server services we have make two user naming them client1 and client2.
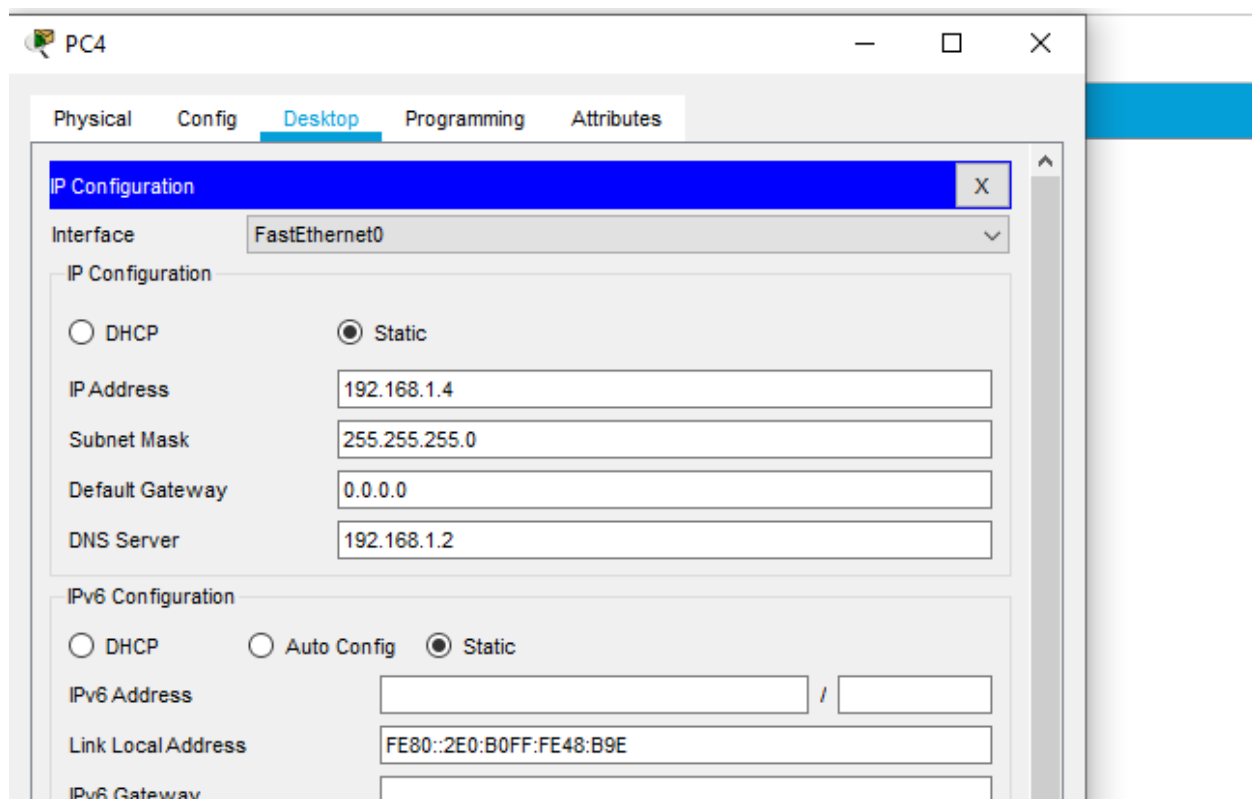

Description:

This is our second server. We have used DNS services by making mail.com an address which is used by Email Network.
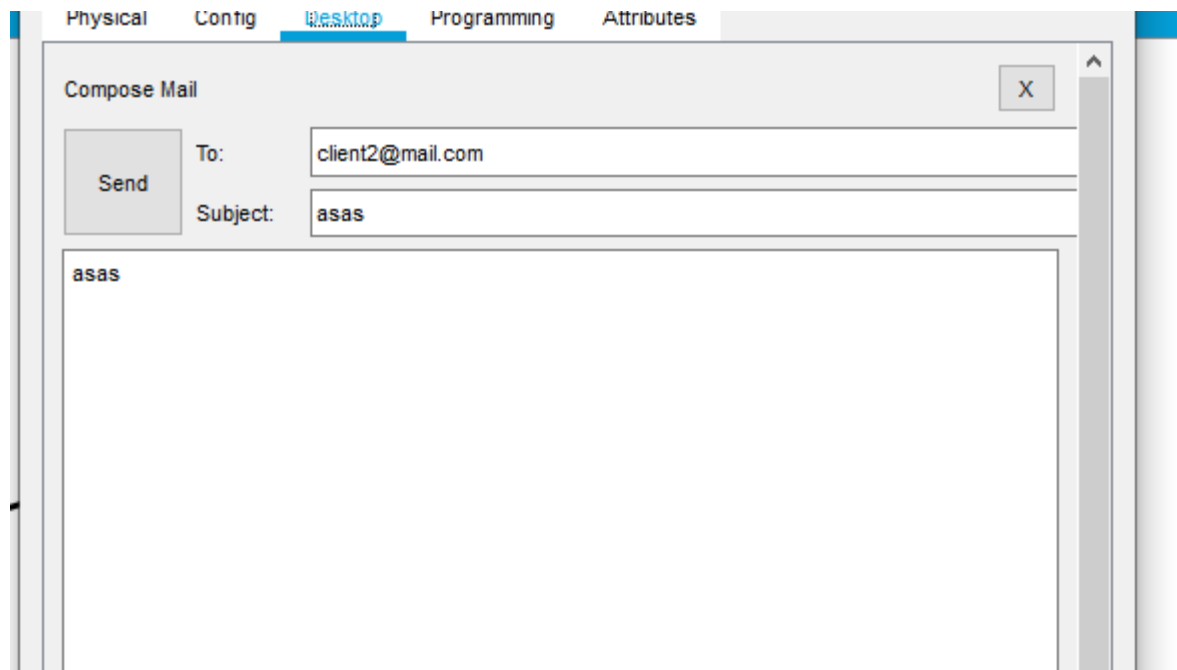

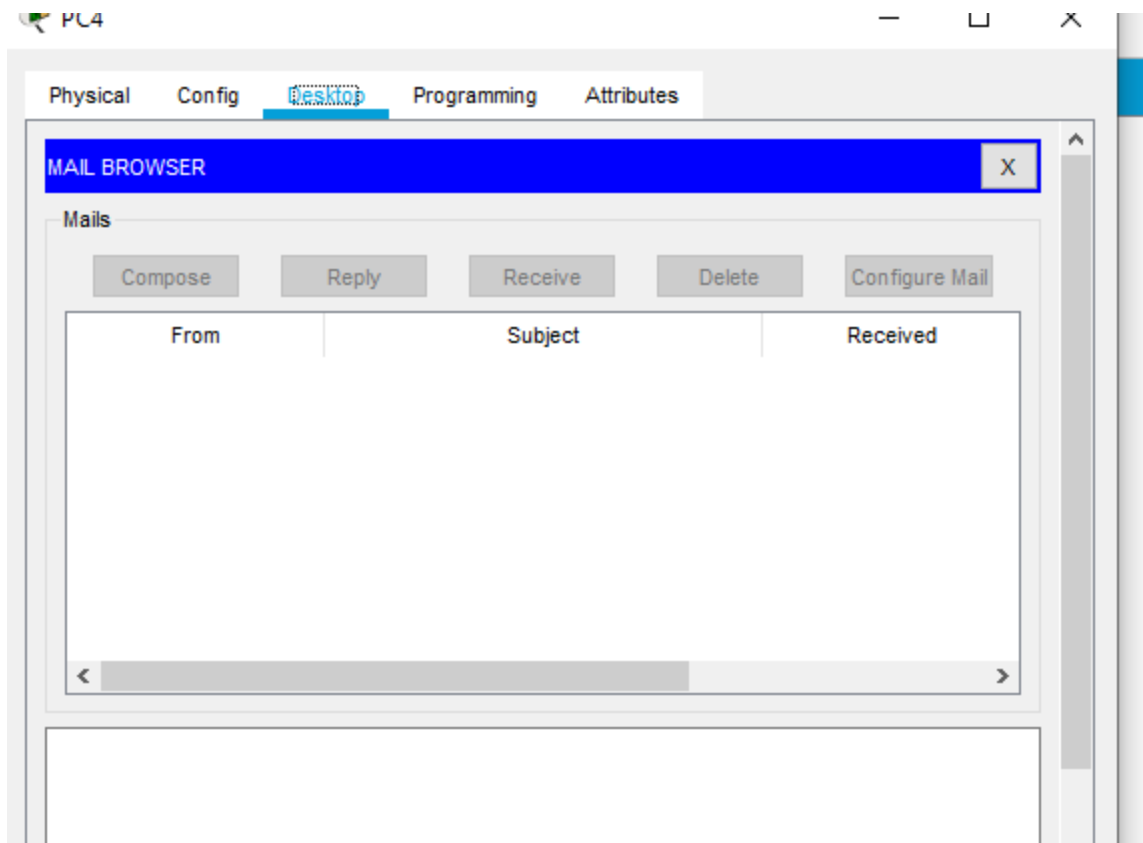

Description:

We have configure PC5 by assigning IP to it.

Description:

We have configure PC4 by assigning IP to it.

Description:

Now we are sending email to Client2 from Client1 by using same network address.

Description:

Email sent but didn't receive by client 2 there is an error I tried so much time.
